

OHB Sweden is a provider of satellites and satellite sub-systems for Low-Earth-Orbit, geostationary and interplanetary missions. We develop, build, test and operate space systems for missions within communications, earth observation, space research and exploration.

We are now looking for an ambitious, inventive and solutions oriented

## Space Business Engineer

As Space Business Engineer you will be a key person in our Business Development and Sales Department, being technically responsible for developing our future business, and responsible for managing and coordinating the technical contents of our commercial proposals.

The activities can cover a wide range of satellite technologies, such as complete satellite systems, Propulsion and AOCS subsystems, as well as preparatory technical studies and developments.

You will work independently and in collaboration with expert staff in the organization as required to establish the best possible solution to be presented to our customers and business partners, aiming at establishing long-lasting relations.

You will also be part of the negotiation team, defending the technical solution and associated costs.

### Qualifications:

- MSc in Engineering (or equivalent), preferably in space related discipline.
- 5 years' experience or more with space profile (or similar) preferably with experience from overall satellite system development, mission design and satellite applications. Recently graduated with a relevant space profile and high business interest can be considered.
- Interest in and experience of combining the technical and commercial aspects of space business.
- Excellent oral and written communications skills in English and preferably in Swedish.

Being a company with around 100 international employees and growing, much of the expertise lies on the employee to handle tasks autonomously, efficiently and work closely with colleagues, suppliers and customers. Some travel will be required.

If you are highly motivated to participate in the development of future space systems, feel confident that you meet the above requirements and want to find yourself in a dynamic and inspiring work environment, then we look forward to hearing from you!
