

Ref: SAI0-OSE-HR-0144

*OHB Sweden is the largest Swedish satellite manufacturer and looks back to over 30 years of space heritage. OHB Sweden has been responsible for all national Swedish missions since the 1980's and was also the prime of the only ESA mission which went to the Moon (SMART-1).*

*OHB Sweden is an end-to-end provider of space systems and develops, builds, tests, and operates satellites for different kinds of space missions within communications, Earth observation, space research, and exploration. OHB Sweden has developed specific expertise in AOCS sub-systems and was a pioneer in autonomous rendezvous and formation flying thanks to the Prisma program. As a Propulsion sub-system provider OHB Sweden has the opportunity to serve all key players of the European Space industry and counts as one of the leaders in Europe in this field. In all domains, OHB Sweden is active in the European and Swedish institutional markets as well as in the commercial market.*

*The headquarters of OHB Sweden in Kista is home to around 90 highly qualified employees. We see ourselves as an agile and innovative team for which the competence, enthusiasm, and dedication of each team member is a key asset.*

*OHB Sweden is a member of the OHB SE Group (ISIN: DE0005936124, Prime Standard) which currently employs over 3000 people and is the 3rd largest Space company in Europe.*

We are now looking for an enthusiastic and dedicated

## **Senior Spacecraft Systems Engineer**

OHB Sweden is engaged in a number of new and challenging spacecraft and small constellation programs - commercially, nationally and with the European Space Agency (ESA). This position is within the Spacecraft Department, where you will work with a team of engineers both during study phases as well as in implementation projects, in all aspects of systems engineering. You shall have a wide experience in several fields of systems engineering, such as requirements analysis, failure modes and effects analysis, engineering analysis, systems modelling and spacecraft architectural design.

It is desirable that the applicant has experience of working towards demanding and technically competent Customers, such as ESA and NASA. As Senior Systems Engineer, you will be responsible for negotiating technical requirements with the Customers, as well as leading the follow-on requirements analysis and break-down to lower level requirement specifications. As Systems Engineer, you will be overall responsible for defining and maintaining satellite system budgets, performing design trade-offs, controlling interfaces between all subsystems and leading and supervising the technical work of the engineering team.

We are looking for a team-player, providing technical advice to team members, as well as having the ability to work autonomously. Capability for problem solving and initiative are necessary as well as the ability to work in a pragmatic way focusing on finding the right level of quality and to deliver on time.

Applicants are expected to have expertise/experience in one or more of the following areas:

- Expertise in RF, digital design and EMC are seen as strong advantages
- Experience in numerical analytical methods applied in trade-offs, preliminary sizing and bounding of performance requirements
- Architectural principles for spacecraft mechanical and thermal design
- Data handling systems, including both ground and in-flight software
- Attitude and orbit control, orbital mechanics, and mission design
- Be able to provide clear and coherent reporting and presentations in the English language
- Experience from the full life cycle of space systems starting from feasibility analysis (Phase A) through Preliminary Design (Phase B) and project implementation (Phases C/D/E).

Required qualifications:

- As a minimum, Bachelor's or Master's Degree in related Engineering discipline
- At least 5 years of experience in space systems engineering
- Fluent in the English language, both spoken and written

Desired qualifications:

- Experience using Python and/or MATLAB Simulink
- Experience using DOORS or other requirements management tool

The Spacecraft Systems Engineer will work in the Spacecraft department and report to the Head of Department. Travels may be required (3-5 trips per year primarily within Europe).

If you wish to participate to the development of future space systems, feel confident that your experience and qualifications match the above requirements and want to find yourself in a dynamic and inspiring work environment, then we very much look forward to hearing from you!

Please send your application, including CV and personal letter to: [career@ohb-sweden.se](mailto:career@ohb-sweden.se)

Please mark your application: Senior Systems Engineer

We look forward to receiving your application!
